APC Technology's range of Rugged Panel PCs provide a reliable solution designed to endure and perform to the highest levels. Typical specifications include operating temperatures from 0 degree Celsius to +50 degree Celsius, sealing to ingress protection (IP) rating of IP65+ plus a wealth of customisable options including OS and connectivity.

The solutions outlined below are readily available and a sample of the type of options we consistently manufacture but we also specialise in meeting client-specific requirements. Our ability to custom design a solution to meet your needs makes APC Technology your ideal choice.

CT2250 Panel PC

The CT2250 is the perfect cost effective solution for industrial computing needs. The front panel is sealed to IP65 and has been tested to withstand high levels of vibration and shock. With a range of customisation options, the unit can be configured to meet a client's requirements.

FEATURES

- Choice of display sizes
- Fully sealed to IP65
- Rugged construction
- Tactile feel
- PS2 or USB connection

Customisation options include:-

- Mounting bracket
- Touchscreen
- Power supply
- Stainless steel face plate
- I/O requirements

ET4550 Panel PC

The ET4550 15" panel PC is designed for use in industrial environments where plastic will not do the job. Featuring a stylish machined aluminium face plate sealed to IP65 and laminated safety glass face plate, the ET4550 is an ideal addition to any industrial application.

FEATURES

- Front panel sealed to IP65
- Laminated safety glass
- 15" standard with a choice of display size

Customisation options include:-

- Mounting bracket
- Touchscreen
- Power supply
- Stainless steel faceplate
- Connectors
- I/O requirements
